

Basics of Redirection (error handling)

- 1) Write a program in any language like C, C++, Java.
- 2) And redirect the output or error to a new file.

OR

- 3) Create a text file with some content like your name, address.
- 4) Redirect the content to a new file.

ANS:

```
GNU nano 6.2                                redirect.sh
#!/usr/bin/env bash

echo "Name: Harsh" > assignment33.txt
echo "Address: Chennai" >> assignment33.txt
cat assignment33.txt > assignment33_1.txt
```

```
harsh@harsh: ~
harsh@harsh:~$ ./redirect.sh
harsh@harsh:~$ cat assignment33.txt
Name: Harsh
Address: Chennai
harsh@harsh:~$ cat assignment33_1.txt
Name: Harsh
Address: Chennai
harsh@harsh:~$
```
