Basic Commands in Linux

1) Commands are actually files containing programs, often written in C. How will you find out in which directory does the file corresponding to the man command resides?

 $\underline{\textbf{ANS:}}$  We can use the 'type' command to identify the file containing the commands.

Examples:

- 1.type ls
- 2.type ps
- 2) How will you find out what is the use of the ps command.

<u>ANS:</u> We can use the 'man' command to find the use of 'ps' command. 'ps' command is used for listing the current processes running at the background and foreground.
