More on Redirection

1) Create X_file.txt file with some content.
2) Redirect the content of both out_file.txt and X_file.txt to a new file

ANS:

```
  GNU nano 6.2                          redirect2.sh
#!/usr/bin/env bash

cat out_file.txt X_file.txt >> new_file.txt
```

```
harsh@harsh:~$ chmod +x redirect2.sh
harsh@harsh:~$ ./redirect2.sh
harsh@harsh:~$ cat new_file.txt
ls: cannot access /user: No such file or directory
/usr:
bin
games
include
lib
local
sbin
share
src

hello world
This is a sample file
It is used to demonstrate redirection.
Bye
harsh@harsh:~$
```
